EXECUTIVE SUMMARY

Enterprise data and information executive with 25+ years of leadership across healthcare, government, and private-equity-backed growth environments. Builds data strategies, governance operating models, and scalable platforms that connect claims, eligibility, clinical, operational, and financial information to measurable business outcomes. Deep expertise in HIPAA, PHI protection, AI governance, enterprise architecture, metadata management, and cross-functional transformation. Served as incident commander and Interim Chief Information Risk Officer during a major healthcare data breach, coordinating executive, legal, federal, and law-enforcement stakeholders through NIST 800-53-aligned remediation. Trusted advisor to C-suite, product, engineering, legal, compliance, and security leadership.

PROFESSIONAL EXPERIENCE

Executive Information Technology, Data, Security & Transformation Leadership, Oregon Health Authority

2008 – 2025

Held progressively responsible executive and senior leadership roles supporting one of the nation's largest public-sector healthcare organizations. Led enterprise data, technology, governance, cybersecurity, privacy, architecture, and transformation initiatives serving Medicaid, managed care, public health, behavioral health, long-term services, seniors, and people with disabilities.

- Shaped enterprise data and information strategy across eligibility, claims, clinical, operational, financial, public health, provider, and program domains while strengthening trusted use of healthcare information.
- Partnered with Medicaid, Coordinated Care Organizations, healthcare programs, product and delivery teams, legal, privacy, compliance, security, finance, procurement, vendors, and executive leadership.
- Developed governance frameworks for data ownership, stewardship, metadata, business definitions, information classification, quality, privacy, retention, access, and lifecycle management.
- Directed complex healthcare transformation portfolios up to \$15M, translating legislative, regulatory, operational, and service requirements into roadmaps, architecture decisions, governance, and measurable delivery outcomes.
- Developed the organization's first comprehensive Agency Security Plan, establishing an enterprise roadmap for control maturity, risk reduction, governance, investment, accountability, and sustained remediation.
- Served as Interim Chief Information Risk Officer and incident commander during a major healthcare data breach involving sensitive information, coordinating executive, legal, privacy, security, communications, program, law-enforcement, and federal stakeholders.
- Led NIST 800-53-aligned control implementation, assessment response, evidence development, corrective-action tracking, executive reporting, and operational remediation in a highly regulated HIPAA environment.
- Improved enterprise information quality, executive visibility, and organizational accountability through governance councils, portfolio reporting, KPIs, roadmaps, and cross-functional operating models.

Recruited following private-equity investment to build enterprise technology and information capability for a rapidly growing manufacturer. Served as executive advisor on data, platforms, cybersecurity, architecture, governance, and operating scalability.

- Established the company's first long-term enterprise technology and information strategy, aligning data, platforms, governance, security, and priorities with growth objectives and private-equity expectations.
- Built and led a multidisciplinary organization spanning enterprise applications, ERP, infrastructure, cybersecurity, cloud, data, analytics, integration, and end-user services.
- Directed modernization across NetSuite ERP/WMS, Salesforce CRM, Shopify, Celigo integration, EDI, Power BI, Microsoft 365, Azure, identity, and endpoint platforms, connecting finance, manufacturing, inventory, sales, customer operations, and reporting.
- Established enterprise data ownership and stewardship across Finance, Manufacturing, Sales, Operations, Marketing, and IT; developed shared definitions, metadata practices, information classification, lifecycle standards, and analytics priorities.
- Created the Technology Steering Committee and introduced decision rights, portfolio governance, stage gates, readiness criteria, executive dashboards, and cross-functional accountability.
- Established responsible AI governance connecting use-case intake, acceptable use, privacy, security, vendor review, data quality, human oversight, documentation, and measurable business outcomes.
- Directed a \$3M+ technology portfolio supporting a \$200M private-equity-backed manufacturer while governing consulting firms, system integrators, managed providers, contracts, licensing, and vendors.

Earlier Product, Software & Delivery Leadership,

Microsystems for Education and Business; Oregon Health Authority

2001 – 2008

- Led product development and software-delivery activities, providing a hands-on foundation in requirements, application design, data structures, development, testing, implementation, and customer needs.
- Directed complex technology programs involving business leaders, technical teams, vendors, regulated operations, and organizational change.
